

[LIGHT SOURCE MODULE WITH ILLUMINATION UNIFORMITY]

Abstract of Disclosure

A light source module with illumination uniformity, suitable for use in a scanner. The light source module has a printed circuit board, multiple light emitting-diodes, and at least one light-collecting column. By installing reflection boards, or using a specially processed light-collecting column, the light-emitting diodes of the light source module can have the light source with an increase of the illumination as required.
